OPAC

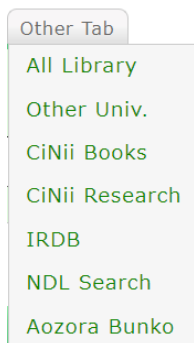

<OPAC Top Page>

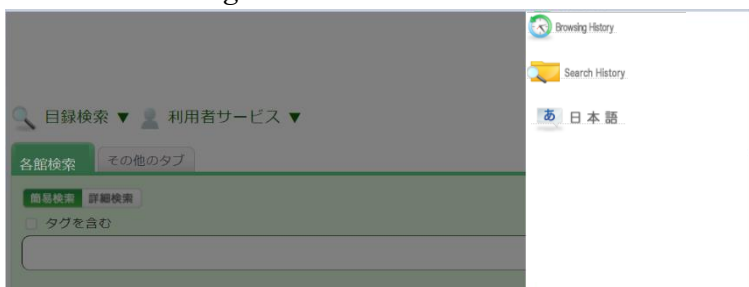

Depending on the size of the screen, the page will change to fit on the screen.

When you click the “Other Tabs”, the following option will be displayed, and you can select one of them. If you click the tab again, it will return to the original state.

If you click the red icon, the menu will be displayed. Click outside of the menu to return to the original state.

How to search for materials

■ WebOPAC Basic Search

The screenshot shows the top navigation bar with links for NIT, College, All Library, Other Univ., CiNii Books, CiNii Research, IRDB, NDL Search, and Aozora Bunko. Below this is a search bar with 'Basic Search' selected and 'Advanced Search' as an option. A 'contains tag' checkbox is visible. A search button is on the right.

Callout 1: You can switch to advanced search by clicking the "Advanced Search".

Callout 2: By checking the box, you can search for tags.

Callout 3: Type in a keyword and click the search button to display the list of bibliographic search results. When the search result is found, it will transition to the bibliographic details.

■ WebOPAC Advanced Search

The screenshot shows the advanced search interface with various filters and search criteria. The 'Basic Search' button is highlighted.

Callout 1: You can switch to basic search by clicking the "Basic Search".

Callout 2: *Material type: All Books Serials

Callout 3: You can filter your search by choosing the place of installation.

Callout 4: You cannot search by only putting items marked with * (asterisk).

Other visible fields include: search bibliography in the Library, AND Authors name, AND Publisher, *Publication year, ISBN/ISSN, NCID, Bibliography ID, Registration number, Material ID, Call No, Sort by: Year(Newest), Code, *Country code, *Language code, Classification, and List count: 10 Items.

There are two methods to search: **keyword search** and **literal search**.

1. The keyword search is a search of materials to find those containing the searched words (i.e., keyword).

The literal search is a search of materials to find those containing the simple character (i.e., literal).

For the literal search, you can specify the following search methods.

Search method	Description	Example	Example of search results
Exact match	Retrieves the materials that has a complete match to the character.	end	end END End
Prefix match	Retrieves the materials that has a character, matching the prefix.	end*	Ending
Partial match	Retrieves the materials that has a match to the partial character.	*end*	Weekends
Suffix match	Retrieves the materials that has a character, matching the suffix.	*end	Weekend

2. The following “Keyword search item” is used for normal keyword search. To use the following “Keyword search item” and the literal search at the same time, **add “#” in the beginning of the search values**.

Keyword search item

- Title
- Author

- Publisher
- Subject
- Keyword

3.The following search items are used for normal literal search.

Literal search item

- Year of publication
- Classification
- ISBN/ISSN
- Country code
- Language code
- NCID
- Registration No. (available only with prefix search)
- Material ID (available only with prefix search)
- Call No. (available only with prefix search)

By choosing the search conditions, or by using the literal search, you can set the details of the search conditions.

Search method	Example (Item: Search value)	Example of search results
Searching for materials that contains the keyword "Japan" in the title	Title: Japan	History of Japan Old tales of Japan America and Japan
Searching for materials that the title is "Japan"	Title: #Japan	Japan

Search method	Example (Item: Search value)	Example of search results
Searching for materials that the title ends with "Japan"	Title: #*Japan	America and Japan The Rebirth of Japan Japan
Searching for materials published in the 1900s	Publication year: 19*	1945

What should I do if I want to use the multiple search (such as one including x or y)?

You can search by putting multiple conditions in the search categories or filling in multiple search fields. There are three ways to search (logical operation).

Entering multiple search values in one search categories (available on the basic search page and advanced search page)

Logical AND search: Searches for materials that simultaneously satisfy two or more search values

Methods to search: Connect all search values with " " (blank).

Example: Search for materials containing both "Japan" and "America"
"Japan America"

Logical OR search: Searches for materials that satisfy any one of them, when there are more than two search values

Methods to search: Connect all search values with "+" (plus sign).

Example: Search for materials containing either "Japan" or "America"
"Japan+America"

Logical NOT search: Searches for materials that satisfy certain conditions that do not satisfy other corresponding conditions

Methods to search: Connect all search values with "^" (caret).

Example: Search for materials containing "Japan" but not "America"
"Japan^America"

Entering multiple search values in multiple search fields (available on the advanced search page)

Logical AND search: Search for materials that simultaneously satisfy two or more search values

Methods to search: Put search value in multiple fields and select "AND" from the pull-down menu between the fields.

Example: Search for materials containing "Japan" in the title and "Tokyo" in the author's name

Title: Japan

Pull-down menu: AND

Author: Tokyo

Logical NOT search: Searches for materials that satisfy certain items that do not satisfy other items

Methods to search: Put search value in multiple fields and select "NOT" from the pull-down menu between the fields.

Example: Search for materials that contain "Japan" in the title and do not contain "Tokyo" in the author's name

Title: Japan

Pull-down menu: NOT

Author: Tokyo

Primary search items and secondary search items

The following search items are called primary search items. You can search independently with those search values.

- Keyword
- Title
- Author
- Publisher
- Subject
- Tag

- Classification
- ISBN/ISSN
- NCID
- Bibliography ID
- Registration No.
- Material ID
- Call No.

The following search items are called secondary search items. You cannot search independently with the secondary search item unless it is combined with at least one primary search item. The search page displays * in front of the item names.

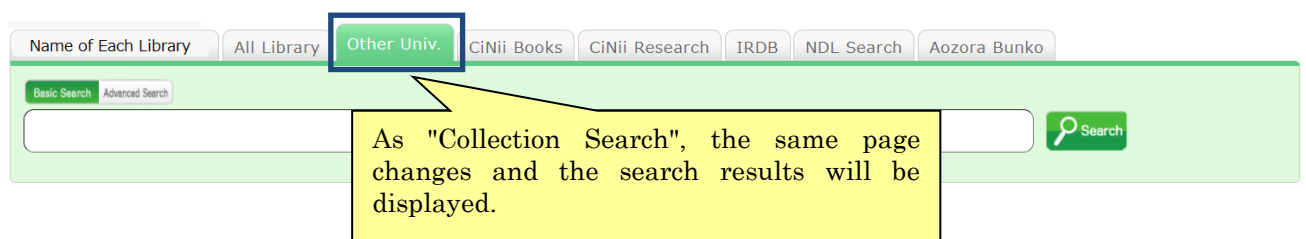

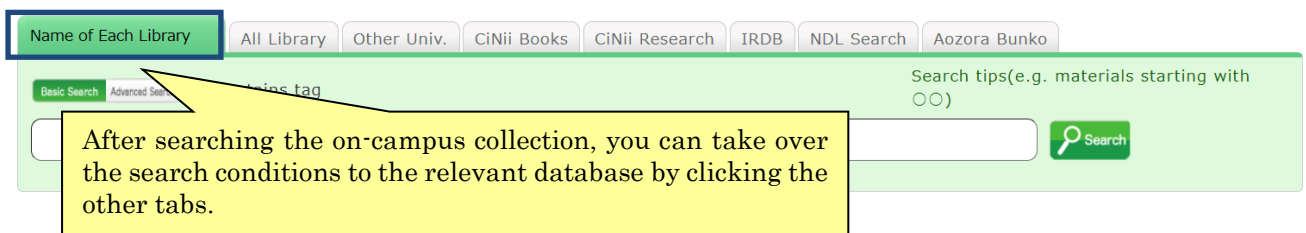

- Material type
- Holding library
- Year of publication
- Country code
- Language code
- Location
